

AIRBart

Thursday, 07 May 2009

Last Updated Thursday, 07 May 2009

AIRBart is a small AIR application I wrote to display current BART departure times in the San Francisco Bay Area. Simply choose your current closest station from the dropdown, and it will show you departure times to all of the major endpoints in the BART system.

It's my first attempt at a serious AIR app, and it's waaay beta, but it's functional enough that I use it every day. Please download it, test it, and give all critiques. This requires the AIR Framework from adobe, which is cross-platform, and thus this should work on mac or windows (and kindof/eventually on linux? C'mon adobe...).

Mad props to Jonnie of Destroy Today, whose apps look so good I had to make mine fit his color scheme.

TODO:

- get icons working
- clean up internal logic
- figure out why the installer doesn't tell you the app has a certification

-
